

## DESCRIPTION

The covers H9-LC\*X are designed to hold Hydronine make Cartridge valves in cavities machined as per ISO 7368, and to provide oil passage to their control port C via X port provided on the cover to control the opening and closing operation of the cartridge valve.

The passage has an orifice screwed into it, for influencing the rate of opening and closing of the poppet of the cartridge valve, there by reducing / eliminating shocks in the main circuit oil flow. The threaded port on the cover can also be used for diagnostic purpose or for parallel supply of oil to some other function.

This is particularly useful for the onsite modifications to the circuit

## HYDRAULIC SYMBOL

## TECHNICAL SPECIFICATIONS

Mounting interface	:	As per ISO 7368
Hydraulic medium	:	Mineral oil.
Temperature range	:	-20°C to + 80°C.
Viscosity range	:	10 cSt to 380 cSt.
Fluid cleanliness required	:	ISO 4406 20/18/15 or better.

### UNIT DIMENSIONS

Dimensions in mm.

**Notes:**

Mounting interface for Cover as per ISO 7368, for dimensional details and engineering data refer Cartridge valve data sheet D03426

\*Cover fixing S.H.C Screws are **OUT OF SCOPE OF SUPPLY.**
